

Aliaksandr Zhebit

Belarus, Gomel

aliaksandr.zhebit@gmail.com | [GitHub](#) | [LinkedIn](#)

Software Engineer with 5+ years of experience in frontend and full-stack development. Experienced in building enterprise web applications, dashboards, ERP/CRM workflows, and internal automation tools. Skilled in designing user-facing workflows, improving complex UI systems, and working across frontend, backend, databases, and integrations.

Experience

CAE TECHNOLOGY 2024 - Present

Sourceability 2024 - 2026

Role: Full-stack Developer

Stack: Angular 17-19, PrimeNG, ChartJS, .NET 8-10, ASP.NET Core, EF Core, SQL Server, RabbitMQ, SignalR, Python, Docker

Developed features and supported production releases across both frontend and backend layers for a global enterprise supply chain and ERP/CRM ecosystem handling electronic components distribution, RFQ workflows, and warehouse operations, alongside its analytics sub-project, Zollner.

Key Contributions

- Implemented the majority of global UI features, interactive dashboards, reporting charts, reusable components, and state management systems.
- Led frontend development for the Zollner analytics sub-project from PRD to production, delivering dedicated Shortage and PPV workflows with full audit trail support.
- Developed robust backend logic, delivering complex KPI calculations, reporting APIs, and automated background services integrated with multiple external systems for cross-platform data synchronization.
- Resolved performance bottlenecks across Angular rendering layers, API response times, and database queries.
- Enhanced Azure CI/CD pipelines with automated Angular UI testing steps to streamline the validation process.
- Resolved complex production issues end-to-end across the entire application stack to maintain system stability and performance.
- Expanded internal AI-assisted ecosystem tools by adding specialized workflow capabilities to a Model Context Protocol (MCP) server for Azure DevOps.
- Investigated agentic workflow frameworks, local LLM execution, and Docker-based automation pipelines for an internal web application generation prototype.
- Conducted UI technical interviews, facilitated onboarding processes, and provided technical assistance to development and QA teammates.

ITECHART GROUP 2020 - 2023

Ernst & Young (EY) Raptor 2021 - 2023

Role: Lead Frontend / Full-Stack Engineer

Stack: Angular 7-14, ASP.NET Core, SSMS, SQL, Azure

Coordinated frontend development and full-stack feature delivery for the EY Global Tax Platform (GTP), a secure cloud environment integrating disparate data sources for global analytics, compliance, and tax visibility.

Key Contributions

- Spearheaded the frontend development efforts as Lead Engineer, overseeing the design, development, and optimization of modular and reusable components.
- Implemented feature modules with complex logic and interceptors for seamless user experiences.
- Optimized application performance, achieving a 20% increase in responsiveness and a 30% reduction in development time.
- Conducted codebase cleanups to reduce technical debt and improve maintainability.
- Increased test coverage from 30% to 70%.

- Played a pivotal role in supporting and enhancing the Micro Frontend (MFE) system, including chunk generation, lazy loading, and resolving critical issues.
- Built backend endpoints, database tables, migrations, and import/export functionalities.
- Mentored UI developers across teams and provided basic DevOps support (variable management, Git flow pre-push hooks).

MPRE 2020 - 2021

Role: Frontend Engineer

Stack: Angular, React, Django, Postgres, Docker, CircleCI, Sentry

Engineered user interface layers for a Swiss real-estate platform integrating property search, automated valuation engines, and financing solutions.

Key Contributions

- Developed frontend features using Angular, Angular Material, and Chart.js to scale the platform and improve the UI.
- Integrated Google APIs (Maps, Street View, Analytics) for enhanced user insights.
- Refactored and redesigned the frontend source code.

Open Source

Raycast 2024

Stack: React, Node.js, Swift, AppleScript

Raycast is an open-source collection of powerful productivity tools integrated into an extendable launcher.

Contributed extensions

- **Speedtest (150k+ downloads):** Runs internet speed tests directly from the app.
- **ConsoleDev (2.7k+ downloads):** Integrates essential developer console tools.
- **Toggle Audio Input (6k+ downloads):** Command and menu bar extension to mute/unmute microphones.

Education

Francysk Skorina Gomel State University 2015 - 2019
